

WHY PERLICK?

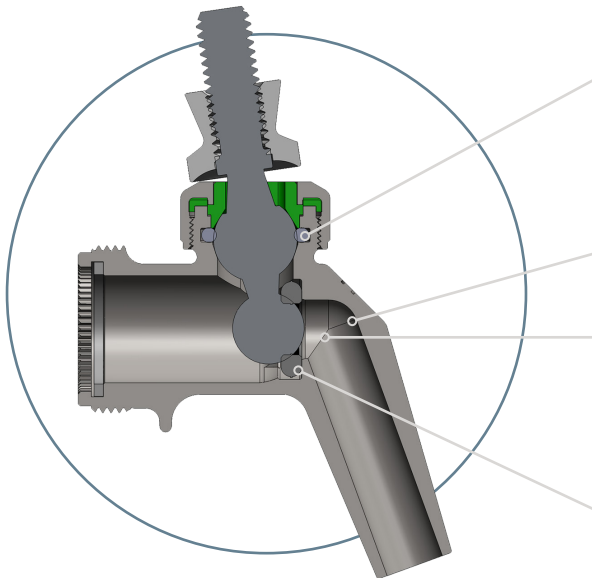

QUALITY & INNOVATION PERLICK'S FORWARD SEALING FAUCETS

FEATURES & BENEFITS

- **304 stainless steel** beverage contact areas **protect beverage flavors** of wine, beer, cocktails, and more
- Micro-finished interior produces a smooth flow with less foaming, **maximizing keg yield and profit**
- Designed to withstand years of high volume use with minimal risk of component replacement, **saving you time and money**

Floating O-Ring Design

- Innovative design ensures beverages are **never exposed to air** and **eliminates the buildup of mold or bacteria** within the faucet, protecting the flavor of each pour

Almost Vertical Spout Angle

- Vertical spout angle provides for a **smoother pour** and **efficient drainage** after each pour
- The drop off angle leaves no area for flat beer to collect, ensuring the quality of your next pour, **reducing the likelihood of waste, and increasing keg yield and profit**

Forward Seal

- The forward positive seal sits directly against the spout drop off so all liquid drains out or remains packed behind the seal, **optimizing the quality** of the following pour and **maximizing keg yield**
