

PERLICK CR24 COLUMN REFRIGERATION

PLANNING GUIDE

ALL THE DELICIOUS DETAILS OF THE NEW PERLICK CR24 COLUMN REFRIGERATION

Enjoy the flexibility of Perlick column refrigeration by mixing and matching units to create custom storage for food, wine and beverages. Columns can be installed individually or installed side-by-side in a pair or more to serve any sized kitchen.

The following provides installation guidance for planning your space. For complete installation instructions, please refer to the column installation guide on perlick.com/residential.

HEAT MAT REQUIREMENTS FOR MULTI-UNIT INSTALLATIONS

If installing a freezer side-by-side with a refrigerator or wine column, a dual installation kit (CR-ACC-D1) is required. The heat mat is installed between the units to prevent condensation and does not require a dedicated outlet.

DOOR OVERLAY PANELS

Perlick CR24 column refrigeration comes ready to accept a customer-supplied door overlay panel and customer-supplied handle. A minimum 5/8" thick panel is required, however, the thickness can increase provided the panel does not exceed a weight of 65 lbs. The depth of each model is 24" without a finished overlay, so be sure to allow for panel thickness when planning the finished opening depth.

This guide includes solid and glass door templates with 4" and 6" toe kicks. Please note that when installing a panel thicker than 3/4", a 90° stop may be required to prevent damage to both the unit and surrounding cabinetry.

SOLID DOOR OVERLAY TEMPLATE FOR 4" TOE KICK

Measurements shown in inches ("")

SOLID DOOR OVERLAY TEMPLATE FOR 6" TOE KICK

Measurements shown in inches ("")

REVEALS

Reveals between panels can vary — 1/8" is the minimum. As reveals between cabinetry and the unit decrease, severe finger pinching can occur while the door is closing.

OVERLAY CLIP DETAIL A & B

Measurements shown in inches (")

SCREW ZONE FOR DOOR OVERLAY TEMPLATES

Shaded areas (shown right) should provide enough thickness for wood screws for overlay attachment bracket.

Door handle must be attached to overlay panel prior to installing panel onto the unit. Mounting screws for the handle should be recessed or countersunk into the back side of the overlay panel.

INSTALLING PERLICK COLUMN REFRIGERATION

Designed specifically to be integrated into cabinetry, Perlick column refrigeration brings commercial-grade performance and preservation to any style of kitchen. Columns can be installed separately, or in side-by-side installations to create custom modular refrigeration.

The following diagrams show various ways to install Perlick column refrigeration and provide information on producing custom overlay panels.

ADJACENT WALL MINIMUM CLEARANCE REQUIREMENTS

If installing column next to adjacent wall, take care to observe minimum required clearances to avoid interference when opening the door. Regardless of handle, a 2" clearance is required if door opens towards a wall. Please note the clearances indicated are based on a standard 3/4" thick door panel and Perlick Two Tone Pro Handle (CR-PRO-HANDLE). Varying door depths and dimensions of customer-provided handle may change the required dimensions.

A 90° hinge stop pin (included with unit) can be installed to prevent the door from opening beyond 90°. Pin must be installed prior to full integration. See installation manual for instructions.

Measurements shown in inches (")

Perlick columns allow you the freedom to install refrigeration separately anywhere in the kitchen.

84"

24-3/4" OVERALL

24" TO FRONT OF DOOR FRAME

23-3/4" OVERALL

3/4" OVERLAY

83-7/8" TO TOP OF OVERLAY

22-1/8" TO CABINET

4" - 6" TOE KICK

21-9/16" TO GRILL

A technical diagram of a cabinet door assembly. It shows a central rectangular area labeled "CABINET" above a smaller rectangular area labeled "DOOR". The door is mounted on a frame. To the left, a hatched area is labeled "SIDE WALL" with an arrow pointing to it. To the right, a hatched area is labeled "FRAME FACE" with an arrow pointing to it. Dimension lines indicate a width of "24\"" for the main cabinet area and a height of "4\"" for the door area.

Perlick columns can be installed side-by-side in a variety of configurations provided the following installation specifications are met. Hinge/handle locations and adjacency to walls/structure must be taken into consideration during the planning process. Choose your desired column configuration on the left and match to the opening (blue label) drawing on the right for the proper cutout dimensions (applies to units installed both with or without dual installation kit.)

If using hinge pins on all units, refer to Opening Dimensions A & B.

7

OPENING DIMENSIONS FOR INSTALLING THREE UNITS SIDE-BY-SIDE

As with dual installations, choose your desired column configuration below and match to the opening (blue label) drawing for the proper cutout dimensions (applies to units installed both with or without dual installation kit.)

For installations involving more than three cabinets, combine the opening dimensions for the openings which correspond to the combined Hinge and Handle combinations shown in this guide.

*90° HINGE PIN

Doors open to 105°. The 90° hinge pin stop can be installed. If hinge pin is installed, all gaps between cabinets can be 1/2".

If using hinge pins on all units, refer to Opening Dimensions E.
